Personalized Light, Reimagined

PrentaLux is lighting the way to the future with innovative and artistic lighting solutions created using 3D printing.

Our proprietary 3D printing process is redefining personalized lighting design, providing designers with more creative freedom. And our sustainable practices—using recycled or mass-balanced, bio-circular plastics, for example—are helping lead the way to a brighter future.

PrentaLux offers its own collection of distinctive lighting as well as collaborations with other Cooper Lighting Solutions brands, infusing their products with sustainable materials and delivering the kind of fast, efficient, and reliable results for which PrentaLux is known.

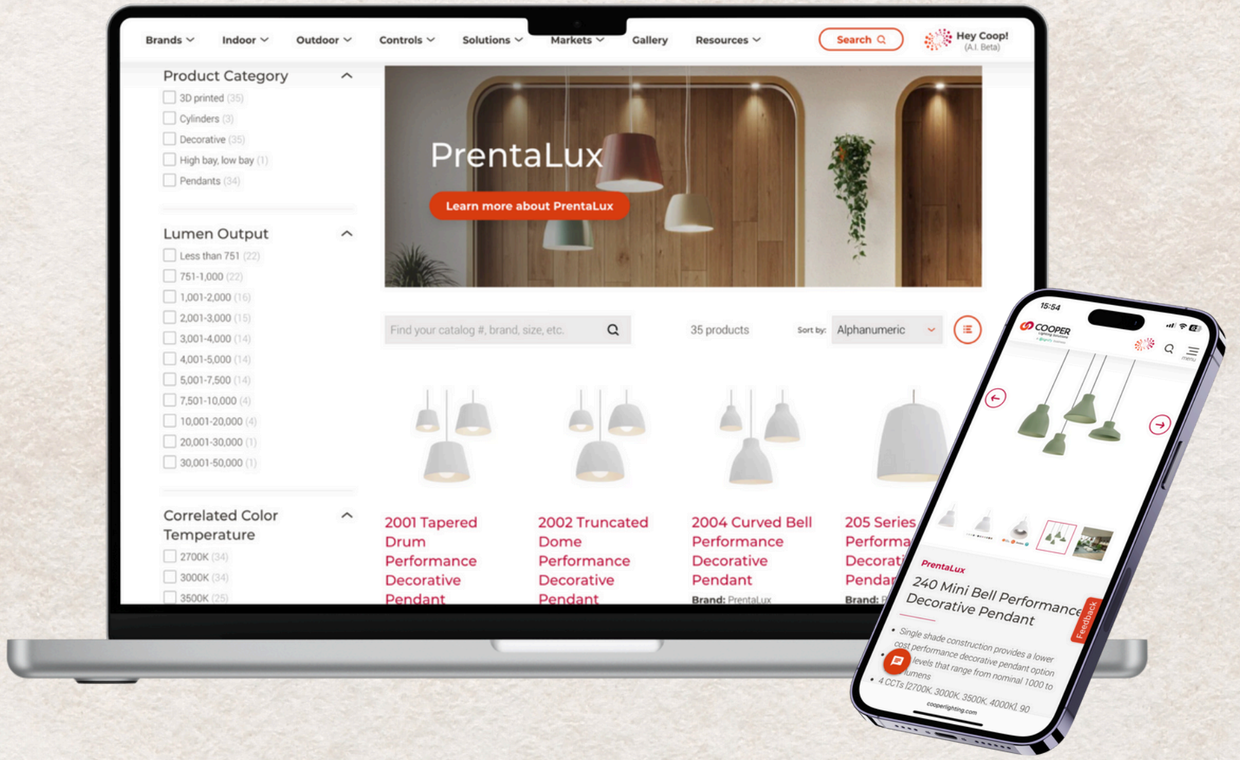
VALUE THAT MATTERS



1. DESIGN

Innovative lighting with unique shapes, customizable options, and easy installation, tailored for modern spaces and special projects.

2. PERFORMANCE

High-performing, energy-efficient luminaires seamlessly integrate with lighting systems, ensuring reliability and ease of configuration.

3. SUSTAINABILITY

Eco-friendly solutions using recycled materials, circular design, and local production to reduce CO_2 emissions and waste.

4. TRUST

Transparent, fast, and reliable, backed by global partnerships and the excellence of Signify, the world leader in lighting. Made in the USA.

CYLINDERS

Beautiful Meets Functional

PrentaLux is transforming cylinder luminaires into creative canvases with the Sustainable LED Cylinders.

Enjoy extensive customization opportunities with an array of colors and textures. These efficient cylinders fulfill both functional and aesthetic needs. Manufactured using 3D printing technology with at least 75% recycled or bio-circular materials, PrentaLux cylinders are environmentally friendly and comply with Buy American standards. Ideal for hospitality, retail, and office settings, they can be used individually for accent lighting or grouped for striking installations.

ETO

Tailored solutions. Delivered fast. At scale.

At Prentalux, we understand that not every project fits a standard solution. That’s why we offer Engineered-to-Order (ETO) lighting - purpose-built to solve specific challenges, without compromising speed, quality, or scalability. Using our advanced 3D printing process and a growing library of modular luminaire platforms, we can adapt, prototype, and deliver unique solutions faster than traditional manufacturing allows. These opportunities are available for orders of qualifying volume.

Real-world impact

1. Chubb

A specifier sought a distinct look and integrated controls.

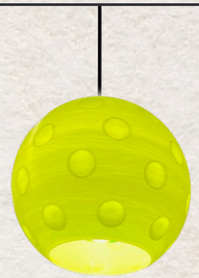
2. AutoStore

Faced with tight timelines and a delayed supplier, the client needed 200+ luminaires ready before office opening.

3. Tuscan Village

Inspired by AutoStore’s results, this client required the same design in a more compact form due to ceiling constraints.

4. Pickleball 603



The client, a premier pickleball club, desired lighting specified for every area of the high-end club.

PrentaLux | Chubb (ETO)

The specifier wanted a luminaire that differed significantly from the originally approved design - both aesthetically and functionally. Instead of pushing back, we engaged directly in a “whiteboard session” to explore ideas collaboratively. Beyond aesthetics, Chubb also required **integrated controls** not supported by the standard product. The result? **718 customized luminaires** delivered for a new building - on time, at scale, and exactly to spec**.**

Table of Contents

PrentaLux | AutoStore (ETO)

When the original lighting supplier failed to meet project deadlines, AutoStore faced a critical delay in opening their office. Within days, we presented a tailored concept rendering, followed by physical samples for quick approval. Working from our existing luminaire platform, we adjusted the design to their exact specifications and produced over 200 units - fully printed, assembled, and delivered within two months. Today, these luminaires have joined our standard portfolio, as the 210 performance decorative pendant.

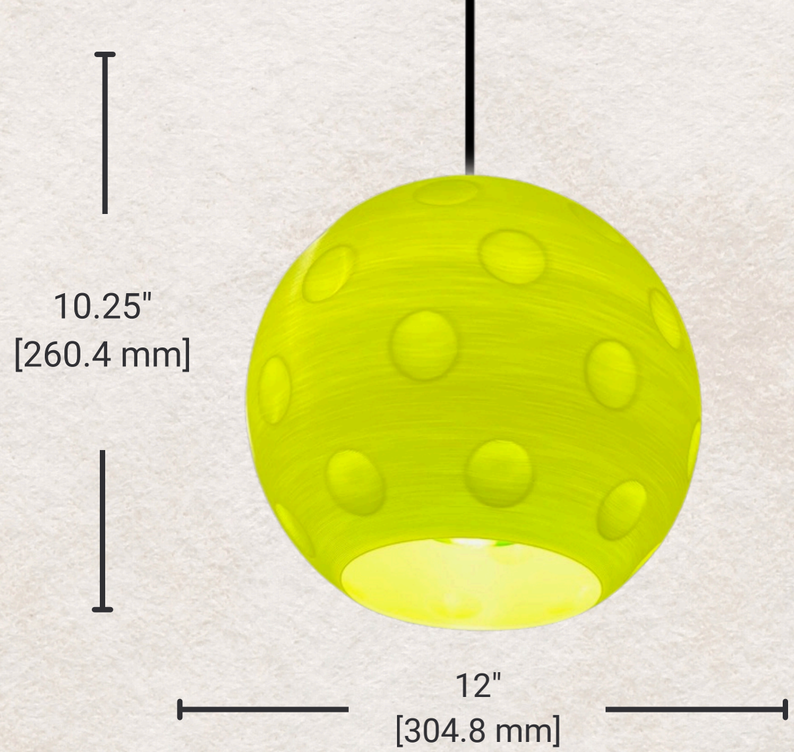
PrentaLux | Tuscan Village

After seeing the AutoStore solution, the Tuscan Village team wanted a similar design but faced reduced ceiling heights due to HVAC constraints, making the original luminaire unfit. To avoid compromising performance or design, **a shorter, compact version** was quickly re-engineered **using modular 3D-printed architecture**, allowing the client to maintain their vision and construction schedule without starting over. This luminaire has now joined our standard portfolio as the 206 performance decorative pendant.

PrentaLux | Tuscan Village (ETO)



PrentaLux | Pickleball 603

As a new build, Pickleball 603 sought lighting to enhance every area of the high-end club, from the six outdoor tournament-sized courts to the restaurant and pro shop. With PrentaLux's **personalization opportunities,** the team was able to design and print luminaires in the shape of large pickleballs. These stunning, sustainable luminaires now serve not only as a practical lighting solution but also a popular conversation piece in the restaurant and pro shop.

How we make it work?

- We build on proven product architectures, allowing fast adaptation without starting from scratch
- We scale production from one to hundreds, depending on your needs
- We print locally to accelerate lead times and reduce waste
- We partner closely with clients - from sketch to sample to site delivery
