

# 5 Problems That Waste Money In Your Facility (And The Solutions You Need To Fix Them)

[www.cooperlighting.com/industrial](http://www.cooperlighting.com/industrial)

## 1 Insufficient (Or Poor Quality) Lighting Is Hurting Productivity

**Solution:** Metalux High Bay LED Light Fixtures  
**Products:** OHB, VHB, UHB

Designed for use in large spaces with high ceilings, these budget-friendly light fixtures deliver plenty of lumens and superior light quality and accuracy (CRI) to keep things running efficiently. LED lighting can provide up to 80% less energy than traditional lighting systems.

## 2 You're Constantly Replacing The Lighting In Refrigerated Areas

**Solution:** Metalux Vaportite Light Fixtures  
**Products:** VT3 LED, APVT LED

Fluorescent and HID lighting solutions degrade quickly in cold storage applications because they release more energy as heat. To reduce maintenance costs and hassle, look for LED lighting specifically tested for extreme temperatures and environments.

## 3 Lighting In Unoccupied Spaces Is Wasting Energy

**Solution:** Greengate Sensors and Controls  
**Products:** OAC MicroSet Dual Tech Ceiling Sensors, 0-10V OSW Wallbox Dimmer Sensor

There's no need to constantly light break rooms, restrooms, supply closets, and other spaces that are only occupied some of the time. Greengate occupancy and daylight sensors are an easy energy-saving addition to your lighting plan.

## 4 Managing Lighting & Energy Costs Across Multiple Areas Or Facilities Is Cumbersome

**Solution:** WaveLinx Lite  
**Products:** WaveLinx Lite

With WaveLinx you can connect the indoor and outdoor lighting fixtures across your space or even multiple facilities, and put control and energy data at your fingertips with an easy-to-use app. With out-of-the-box functionality and control confirmation, it's one of the easiest connected lighting systems to install, control, and manage.

## 5 Costly Equipment Is Always Going Missing

**Solution:** Trellix Smart Spaces IoT Platform  
**Products:** Real-Time Location System

Trellix IoT technology unlocks any number of efficiencies in warehouses, including the ability to view the exact location of equipment, assets, or even people with the Real-Time Location app.
