

Product Use Case: HALO Home The Garage

Background

The Garage is an urban-chic, contemporary living space in the Warehouse / Arts District of Downtown New Orleans. Once known as "Stephen's Garage", a car dealership of over 50 years, it now boasts a mix of 60+ apartments and condominiums, a car elevator, fitness center and rooftop pool. All of its units are illuminated by smart wireless lighting and controls from HALO Home.

Challenge

The conversion from parking deck to world-class luxury accommodations with technology-driven design was an enormous undertaking. The focus of capturing the energy of a historic industrial concrete garage combined with a clean modern open-concept aesthetic created a significant challenge for discretely positioning energy efficient lighting and controls within the units. HALO Home offered the perfect wireless smart lighting system to meet the challenge.

Solution

HALO Home Smart Dimmers, Accessory Dimmers, Anyplace Dimmers, Smart Recessed Downlight (RL4) and the optional Smart Internet Access Bridge

Results

- Smart Dimmers were used to create HALO Home-enabled circuits for track and vanity lighting while wireless Anyplace Dimmers were positioned throughout to avoid unsightly wiring conduit.
- The higher-end condos used Smart Recessed Downlights, offering white-tuning and enabling voice control for those using Amazon Alexa or Google Assistant.
