

Cooper Lighting Solutions partners with ZulaFly to solve high-value problems for healthcare, commercial real estate and schools by leveraging Trellix Locate indoor positioning data

The integrated solution will provide real-time location capabilities while managing lighting system and energy usage, creating a safe and secure environment for several different industries

PEACHTREE CITY, G.A. – December 1, 2020 – Cooper Lighting Solutions announced today a partnership with [ZulaFly](#) to deliver solutions that leverages Trellix Locate, Cooper Lighting Solutions' Real-Time Location System (RTLS), in several market segments including healthcare, commercial real estate and schools. The integrated solution allows business and building owners and operators to enhance their client and occupant experience and improve operational efficiency through use cases like contact tracing, asset management, employee workflow and occupancy limit monitoring. By embedding smart sensors directly into the luminaires, Cooper Lighting Solutions is able to provide RTLS capability to customers at a cost that is 30% lower than traditional RTLS system as proven in several facilities.

Trellix Locate processes the aggregated data collected from WaveLinx-enabled luminaires and delivers location data to third-party platforms such as ZulaFly.

"The Trellix partner ecosystem has already begun introducing value-added services, including space utilization, workflow optimization and real-time location services, that can increase the safety of patients, employees and customers," said Eric Jerger, vice president and general manager of Indoor Business at Cooper Lighting Solutions. "Together with ZulaFly, Trellix Locate's RTLS technology will help industries continue to improve upon the safety, security and service they provide to their customers."

In healthcare facilities amidst the recent global outbreak of COVID-19, ZulaFly has leveraged its ability to provide an Enterprise Locating Platform to assist in maintaining infection control; enabling healthcare staff to quickly and effectively execute on CDC recommendations by understanding patient, staff and equipment interactions aimed at helping to contain the spread of COVID-19. This same solution has also been deployed by many other businesses as an important tool to bring employees back into the workspace.

“ZulaFly is privileged to partner with Cooper Lighting Solutions and Trellix in order to further meet the demand of customer use cases and to provide well rounded solutions across multiple verticals, with a current focus on contact tracing,” said Stephanie Andersen, CEO of ZulaFly. “Our primary goal is always to protect an organization’s people and assets in a way no other system can – Trellix will play a significant role in how we constantly improve upon this and provide the best service possible for our customers.”
