

Cooper Lighting Solutions Launches the New McGraw-Edison Galleon II

PEACHTREE CITY, GA (June 30, 2021) – [Cooper Lighting Solutions](#), a business unit of Signify, announced today that it has launched the latest in area and site lighting with the new [McGraw-Edison Galleon II](#). Built for commercial spaces in the retail, office, healthcare, hospitality, transportation and education sectors, this new family of luminaires delivers improved and class-leading efficacy, new mounting options, up to 50% faster installation, and improved serviceability due to its modular architecture.

The new McGraw-Edison Galleon II provides industry-leading optical precision and configurability for specifiers, engineers and architects designing safe and secure outdoor spaces. Galleon II is 100% made-to-order, delivering 36 lumen packages in 16 optical distributions, with 8 color temperature options to accommodate nearly any outdoor site and area application. The streamlined housing and heatsink were designed to eliminate unnecessary materials, while the replaceable power tray and light engine provide a sustainable framework that is easy to maintain over the life of the fixture. Control options range from stand-alone to fully networked solutions, maximizing energy savings while enabling code compliance and building management system integration.

Commenting on this launch, Travis Bouck, Head of Outdoor at Cooper Lighting Solutions said, “Cooper Lighting Solutions is committed to delivering innovative, simple and efficient lighting solutions to the industry. With the launch of Galleon II, we are taking area and site lighting to the next level. Sustainability is a goal for us, and this new solution allows Cooper Lighting to reduce materials in manufacturing and eventual waste streams and deliver higher energy efficiency to its customers.”

This innovation comes at a critical time for commercial builders and specifiers as construction gets back on track following the COVID-19 pandemic. This improvement in commercial construction benefits areas such as stores, warehouses, offices, hotels, and parking garages, which are key to the area and site market. “As the economy rebuilds from the 2020 downturn and people look to get back outdoors, we expect this sector to accelerate faster than before,” said Bouck. “The anticipated growth in commercial construction makes it a great time to have a new, comprehensive product to meet these demands.”
