

End-of-Life Recycling Process

Please recycle your 3D-printed lighting fixture at the end of its useful life to help contribute to a circular economy. Follow the easy steps in the graphic below.

Begin by emailing Steven DiNardi at Colgate Paper Stock Company and Ian Dane Witt at Augmented IT. They will provide a quote, as well as instructions on how to package and ship your lighting fixtures. Once they receive your products, they will disassemble and separate components. Materials will be sold to manufacturers, who will then re-use the polycarbonate to build new products like containers, machine guards, and sheets.

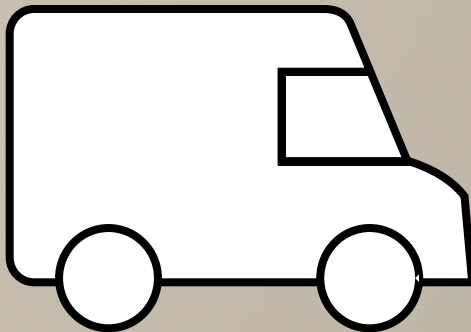

1 Email an established recycler
steven2dinardi@colgatepaper.com
idw@ait-co.com

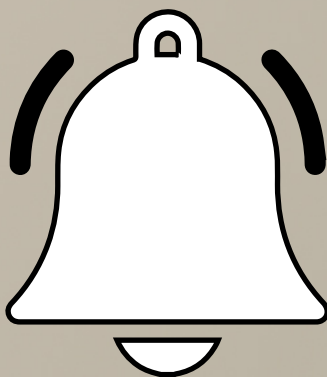

2 Get information on how to recycle the product

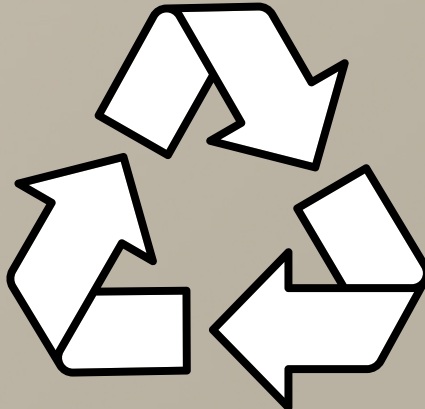

3 Ship the product to the recycler

4 Get notified on which parts will be recycled

5 Recycling

6 New output
