

BEST IN CLASS VISUAL COMFORT SOLUTION

TT TopTier

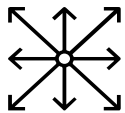

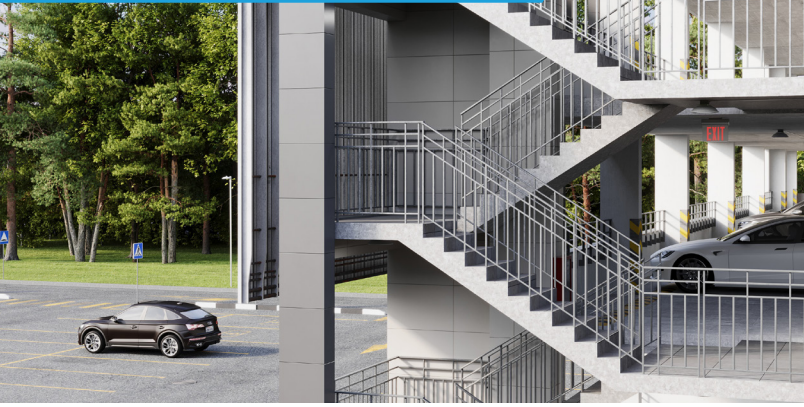

Total
Comfort Trim
Ring (TC)

Enhanced Comfort & Aesthetic Integration

The TopTier TotalComfort (TC) trim ring is the newest innovation in the TopTier Series, designed to reduce high-angle light and minimize perceived glare, delivering exceptional visual comfort.

Engineered to seamlessly blend with the fixture housing for a unified design, the TC option is perfectly suited for parking garages with lower mounting heights as well as area and site applications.

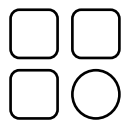

EXPANDED PERFORMANCE FEATURES FOR PRECISION AND CONTROL

Designed for versatility and visual performance, TopTier and TopTier Nano deliver a broad lumen range across five optical distributions. New CCT options (3000K–5000K) meet diverse spec requirements, while a house side shield accessory provides spill light control. These upgrades ensure tailored, high-quality illumination for both performance-driven and design-focused applications.

WAVESTREAM TECHNOLOGY DELIVERS POWERFUL, UNIFORM ILLUMINATION

Featuring patented WaveStream technology, this solution delivers precise optical control with exceptional visual comfort. Ideal for area site applications like surface lots and walkways, it provides uniform light distribution and outputs over 22,000 lumens—making it perfect for high mounting heights and wide spacing requirements, without compromising performance or efficiency.

SMARTER MOUNTING OPTIONS FOR FASTER, EASIER INSTALLATION

TopTier and TopTier Nano now offer expanded mounting options, including direct ½" NPS stem, improved surface, trunnion, and decorative pendant mounts. Combined with conduit, wall, and pole configurations, plus longer lead lengths, these enhancements reduce installation time and cost while supporting a wide range of site conditions and application needs.

APPLICATIONS
