WaveLinx Pro Wireless Relay Switchpack with 0-10V Control

Overview

The Wireless Universal Voltage Dimming Switchpack control is an integral part of the WaveLinX Pro Connected Lighting (WCL) system and offers 120/277/347 VAC (single phase) relay control and continuous 0-10V dimming control of LED and non LED loads. The Wireless Universal Voltage Dimming Switchpack also supports 20 amp plug load control. The switchpack is powered by a 120-347 VAC single phase input using the hot (black) and neutral (white) wires and provides simple junction box mounting through a 1/2" knock-out. The wireless relay switchpack with 0-10V control operates on a wireless mesh network based on IEEE 802.15.4 standards.

The intended use of the Wireless Universal Voltage Dimming Switchpack is for commercial lighting and control integration.

Listed below are a few operating notes related to the switch pack.

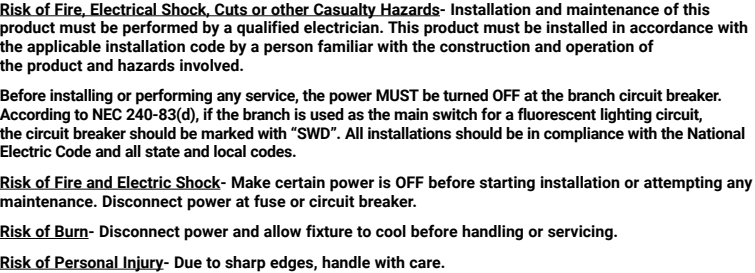

- The basic WaveLinX Pro system uses some number of Wireless Universal Voltage Dimming Switchpack. Each is powered by AC line voltage 120-347VAC (+/- 10%) input power supply with Line, and neutral terminals (single phase).
- The Wireless Universal Voltage Dimming Switchpack also includes a 0-10V output to allow the entire system to be controlled by a single 0-10V control device.
- The Wireless Universal Voltage Dimming Switchpack will support up to 120mA current sink at the 0-10V output and it can switch up to 20 amps plug load.
- **Note:** Specifications and dimensions subject to change without notice.

Most of the components in this system are intended to be mounted above the ceiling tiles, in an area that could be intended for air handling. For this reason, all of the Wireless Universal Voltage Dimming Switchpack cabling is plenum rated.

Note: The components do not meet the plenum rating standards for Chicago without additional measures.

Model	Relay	Plug Load Control
RSP-P-010-347	20 amps	Y

IMPORTANT: Read carefully before installing product. Retain for future reference.
Failure to comply with these instructions may result in serious injury (including death) and property damage.

NOTICE: Designed for indoor installation and use only. 0-10V Dry location rated

FCC Statement

- This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
 - (1) This device may not cause harmful interference.
 - (2) This device must accept any interference received, including interference that may cause undesired operation.

Note: The grantee is not responsible for any changes or modifications not expressly approved by the party responsible for compliance. Such modifications could void the user's authority to operate the equipment.

Interference has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons.

ISED RSS

This device complies with Industry Canada's licence-exempt RSSs. Operation is subject to the following two conditions:

(1) This device may not cause interference; and (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Technology: WaveLinx Pro Relay Switchpack for lighting control based on IEEE 802.15.4. Compatible only with the WaveLinx Pro wireless lighting control system.

Power	Input power: 120-347VAC (+/- 10%) 50/60Hz (Single Phase) Connections: Black (Incoming HOT), White (Neutral), Red (Switched Out), Purple (0-10V +), Pink (0-10V -)
Indicators	LED functionality • Indication of wireless network join request • Indication of wireless network connection • Scene indication of operations • Relay (ON/OFF) status
Installation	Standard junction box or fixture mounting via 1/2" knockout.
Size	1.7"H x 2.6"W x 6.1"L (43mm x 66mm x 155mm)
Software Specifications	Automatically controlled by WaveLinx Pro Occupancy Sensors and WaveLinx Pro Wallstation when added to the same area using the WaveLinx Pro Mobile Application.
Environmental Specifications	Operating Temperature Range: 32°F to 104°F (0°C to 40°C). Storage Temperature Range: 32°F to 167°F (0°C to 70°C). Relative Humidity: 10% to 90% non-condensing, for indoor use only.
Standards	Listings: cULus Certified, FCC. Meets latest ASHRAE Standard 90.1 requirements. Meets latest IECC requirements. Meets latest CEC Title 24 requirements.
Wireless Specifications	Radio 2.4GHz. Standard IEEE 802.15.4. Transmitter Power + 10dBm. Configuration type Router, End Point. Range: 150ft (50m) LOS through 2 interior walls of standard construction. Max # of Devices 200 per Wireless Area Controller (best practice 150 devices).

The Wireless Universal Voltage Dimming Switchpack is designed to be mounted to a solid surface (horizontal or vertical) and attached to a Junction Box. Installation instructions are included for connecting the leads to the fixtures.

Wireless relay switchpack with 0-10V control

20 amp circuit from circuit breaker

Junction Box

0-10V Continuous Dimming luminaire

20 amp circuit from circuit breaker

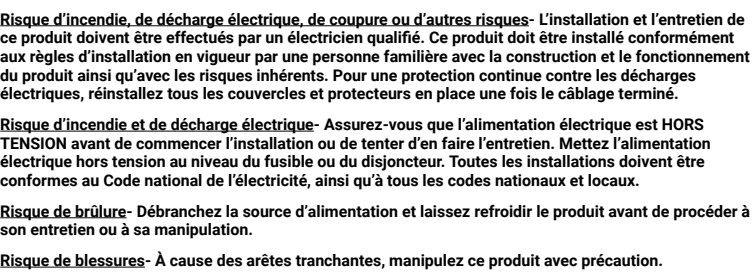

To 20 amp split receptacle

20 amp receptacle

Wireless relay switchpack with 0-10V control (0.25-0.5A/10-5.7V)

Junction Box

IMPORTANT : Lire attentivement avant d'installer le produit. À conserver pour consultation ultérieure.
La désobéissance aux instructions suivantes représente un risque de blessures (y compris la mort) et de dommages matériels.

AVIS : Ce produit peut s'endommager ou devenir instable s'il n'est pas installé correctement.

Remarque : Les caractéristiques techniques et les dimensions peuvent changer sans préavis.

AVIS : Il faut entièrement vérifier tous les nouveaux câblages avant la mise sous tension.

AVIS : Produit conçu uniquement pour une installation et un usage à l'intérieur. Produit conçu pour un emplacement sec.

Nonance de la FCC

Cet appareil est conforme à la partie 15 des règles de la FCC. Le fonctionnement est soumis aux deux conditions suivantes :

- (1) Cet appareil ne doit pas causer d'interférences nuisibles.
- (2) Cet appareil doit accepter toute interférence reçue, y compris les interférences susceptibles de provoquer un fonctionnement indésirable.

Remarque: Le bénéficiaire n'est pas responsable des changements ou modifications non expressément approuvés par la partie responsable de la conformité. De telles modifications pourraient annuler l'autorité de l'utilisateur à faire fonctionner l'équipement.

Remarque: L'équipement a été testé et déclaré conforme aux limites d'un appareil numérique de classe B, conformément à la partie 15 des règles de la FCC. Ces limites sont conçues pour fournir une protection raisonnable contre les interférences nuisibles dans une installation résidentielle. Cet équipement génère des utilisations et peut émettre de l'énergie de radiofréquence et, s'il n'est pas installé et utilisé conformément aux instructions, peut causer des interférences nuisibles aux communications radio. Cependant, il n'y a aucune garantie que des interférences ne se produiront pas dans une installation particulière. Si cet équipement cause des interférences nuisibles à la réception radio ou télévision, ce qui peut être déterminé en éteignant et en rallumant l'équipement, l'utilisateur est encouragé à essayer de corriger l'interférence à l'aide d'une ou plusieurs des mesures suivantes :

- Réorientez ou déplacez l'antenne réceptrice.
- Augmentez la distance entre l'équipement et le récepteur.
- Branchez l'équipement sur la prise électrique d'un circuit autre que celui sur lequel le récepteur est branché.
- Demandez de l'aide au distributeur ou à un technicien radio ou TV qualifié. This device complies with FCC radiation exposure limits set forth for an uncontrolled environment.

Cet équipement doit être installé et utilisé conformément aux instructions fournies et à la ou les antennes utilisées pour cet émetteur doivent être installées pour une distance de séparation d'au moins 20 cm de toutes les personnes.

ISED RSS

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : 1) l'appareil ne doit pas produire de brouillage; 2) l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

1. Ensure power is OFF to all circuits you will be working with.
2. Secure the Wireless Universal Voltage Dimming Switchpack to the Junction Box.
3. Make all power connections:
 - a. The input black wire (HOT) of the Relay Switchpack has HOT Switched output (red wire) to connect to the load that will be powered through the Relay Switchpack.
 - b. The input white wire (Neutral) of the Relay Switchpack is also connected to the load directly.
4. Make all low voltage connections:
 - a. The Relay Switchpack also includes a 0-10V output to allow control of a single 0-10V control device.
 - b. The positive (dim) lead of the luminaires are connected to the purple wire.
 - c. The negative (ground) lead is connected to the Pink terminal.
 - d. Use 18 - 24 AWG solid or stranded copper.
5. Check all electrical and mechanical connections.
6. Close up the Junction Box.
7. Apply power to the circuit.

NOTICE: All new wiring must be fully verified before applying power.

NOTICE: Designed for indoor installation and use only. Dry location rated.

The diagram shows a 120-347 VAC input connected to an RSP (Resistor Switching Power) unit. The input consists of a Black (HOT) line and a White (Neutral) line. The RSP unit has two outputs: Pink (Dimming -) and Purple (Dimming +) which connect to a Driver, and a Red (HOT_Switched) line which connects to a Load. A common ground line is also shown.

- Upon power up, the Relay Switchpack will be ON (closed) until paired with Wireless Area Controller (WAC). Output of 0-10V set to 75% light output.
- Commissioning button will toggle Relay state when button is pressed and released in less than 4 seconds.
- LED will indicate Relay state; if Relay is closed then the LED is ON.
- When the Commissioning button is pressed for more than 4 seconds, the Relay Switchpack will search for a WaveLinux Pro wireless network. The LED will blink at 0.5Hz (slow blink) 50% duty cycle while searching.

1. Upon power up, the Wireless Universal Voltage Dimming Switchpack will look for a WaveLinx Pro wireless network.
2. When the Relay Switchpack joins a WaveLinx Pro wireless network, the Relay turns OFF for 5 minutes.
 - This allows for a visual inspection of which fixtures received the join beacon from the WAC.
 - Document which fixtures did not turn OFF - those fixtures will stay at 75% or full bright light level.
3. When connected to the WaveLinx Pro wireless network the Relay Switchpack returns to full ON light level.

Issue	Possible Causes	Suggestions
LED will not toggle ON when button is pressed	Power Interruption	Check incoming voltage and/or wiring.
Relay Switchpack cannot join a WaveLinX Pro wireless network and/or not reliable	Communication Issue	Check that the Relay Switchpack is within range of WAC without obstacles and can establish reliable communications with the Wireless Area Controller. Check the Wireless Area Controller for additional details.
0-10V doesn't function correctly	0-10V connection Issue	Check wiring connection for purple and pink wires.
Relay doesn't function correctly	Communication Issue	Check that the Relay Switchpack is within range of WAC without obstacles and can establish reliable communications with the Wireless Area Controller. Check the Wireless Area Controller for additional details.
	Relay not toggling	If communication is established, check for a 'clicking' sound of the relay indicating that it's opening and closing.
	Wiring Issues	Check to see if power and load wires are wired correctly according to the wiring section.
