### Overview

To ensure optimal performance of the WaveLinx CAT network, the terminator plug is an essential accessory. It is necessary to terminate the local CAT bus network on both ends. One of the RJ45 connectors on the end device should have a terminator plug installed. Either one of the two RJ45 connectors can be used.

### Product Features & Benefits

- **Clean communication** – Ensures that the network communication remains free from interference and damaged signals.

## System Diagram:

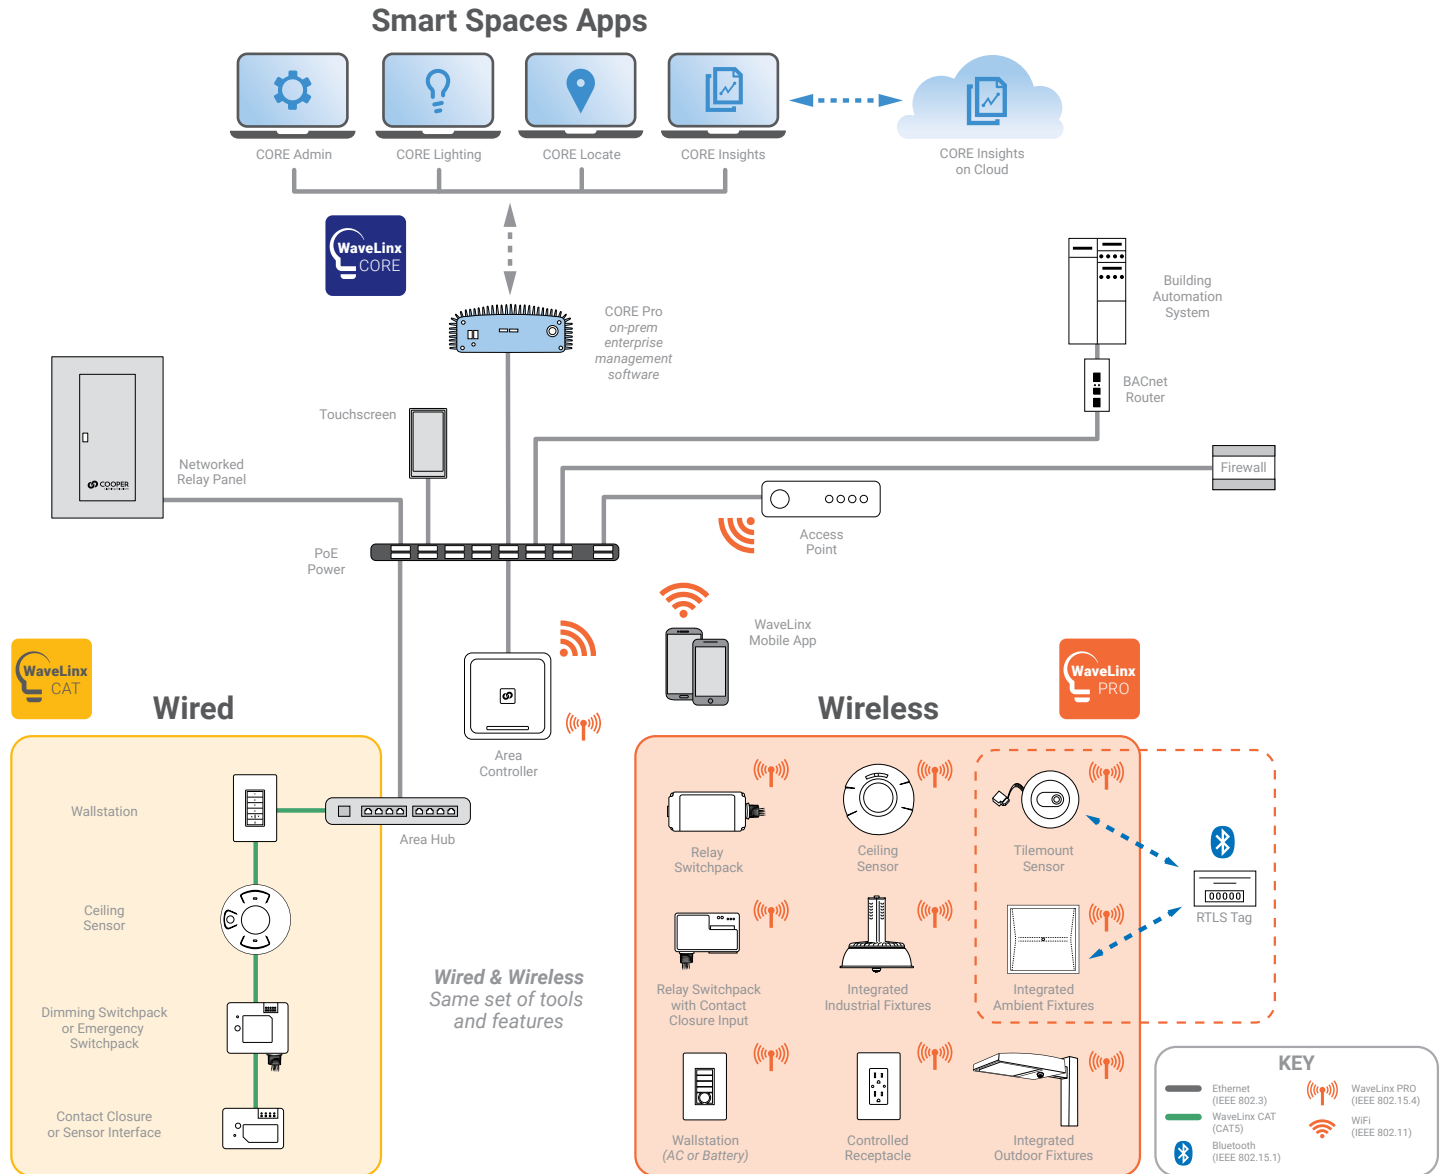

This diagram shows the main components of the WaveLinx connected lighting system with CAT and PRO devices.

The PRO devices communicate using wireless mesh technology based on the IEEE 802.15.4 standard. A PoE LAN connection for each WaveLinx Area Controller (WAC) is required for power and data access to the building lighting network.

The CAT devices communicate over the category 5 based communication bus and control the light fixtures using a relay (on/off) and 0-10V output (dim/raise).

WaveLinx Area Controllers (WAC) communicate with WaveLinx CORE Apps over the Ethernet network.
